

All about Winter

Winter is one of the four seasons; it is the season that comes after autumn. Winter begins in December and finishes in February. This is the season where we have the coldest weather and we can have sleet, hail and snow. Winter is when we experience the longest nights, which means the most amount of darkness and the shortest days, which means the least amount of daylight.

What happens to the animals?

Animals cannot cope with the cold like we do by putting the heating on or wearing a jumper!

Many animals hibernate during the autumn and winter e.g. bears, bees, hedgehogs, frogs, snakes and some types of bats. Some animals migrate to somewhere warmer for the winter, like geese. Other animals store food for the winter so they have enough to eat when there is less food around. Badgers, skunks and squirrels do this.

There are also some animals who adapt when it is cold; they do this by changing the way they look. A mountain hare turns white during the winter to camouflage themselves in the snow.

What happens to our health in winter?

During the winter, it is common for people to suffer from colds and the flu. Symptoms that some people suffer from can include a runny nose, cough and headache.

Which celebrations happen in winter?

Christmas is an exciting time of celebration during winter. Christmas Day is on the 25th of December and is a religious and cultural event, originally celebrated by Christians. Now, many people join in with the celebrations all around the world.

New Year's Day is always on January the 1st and many people celebrate this time of year with friends and family. Many people also join in with the Chinese New Year festival. This celebration takes place in either January or February every year.

Questions

1. Name three types of weather we can experience in winter.
